```python
def quiz_card(card, attempts=3):
    question, answer = card
    tries = 0
    while tries < attempts:
        user = input(f"{question} ")
        if user.strip().lower() == answer.lower():
            print("Correct!\n")
            return True
        tries += 1
        if tries < attempts:
            print("Try again.\n")
    print(f"The correct answer is: {answer}\n")
    return False
```

```python
    for card in flashcards:
        if quiz_card(card):
            score += 1
```

```python
flashcards = [
    ("What is the capital of France?", "Paris"),
    ("What is 2 + 2?", "4"),
    ("Name the process plants use to make food.", "Photosynthesis")
]
```

```python
    score = 0
    for card in flashcards:
        if quiz_card(card):
            score += 1
```
